

The TMT Grabber is a two function manipulator with a single jaw that is suitable for attaching to a greater than standard guidepost. The Grabber is used to grab hold of a structure to allow the vehicle to hold position.

The Grabber can also be used as a platform to deploy various TMT tools.

The use of the Grabber can free up to two other manipulators for performing other work.

### Features:

- Easily transportable
- Easy to install & remove
- Corrosion resistant materials

### Specifications:
